NAME

cef5conv – convert a TeX document in Big 5 encoding containing CEF macros into 'preprocessed' form.

SYNOPSIS

cef5conv < *infile* > *outfile*

DESCRIPTION

The **Chinese Encoding Framework** (**CEF**) developed by Christian Wittern `<cwittern@con-line.central.de>` makes it possible to include CJK characters in various encodings using the SGML macros **&CX-aabb;** for Big 5 and CNS encoding and **&U-aabb;** for Unicode (**X** denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. **aabb** is either a decimal or hexadecimal number).

cef5conv converts the CEF macros of a Big 5 encoded document together with the Big5 encoding itself into a form which can directly processed with LaTeX 2_ε. It is identical to

bg5conv < *infile* | **cefconv** > *outfile*

This filter is part of the **CJK** macro package for LaTeX 2_ε.
