NAME

cfftot1 − convert PostScript font from CFF to Type 1

SYNOPSIS

cfftot1 [−**a**] [*input* [*output*]]

DESCRIPTION

Cfftot1 converts PostScript font programs in the Compact Font Format (CFF) into Type 1 font programs in PFB or PFA format, preserving all hints that can be represented in Type 1. The input file should be a raw CFF file or a PostScript-flavored OpenType font. If the file *output* is not specified output goes to the standard output. If the file *input* is not specified input comes from the standard input.

OPTIONS

−a, **−−pfa**

Output font in ASCII PFA format.

−b, **−−pfb**

Output font in binary PFB format. This is the default.

−n *name*, **−−name** *name*

Output the CFF's component font named *name*. CFF files can contain more than one font, although few do. Use this option to select a particular font from a multi-font collection. By default cfftot1 chooses the collection's first font.

−o *file*, **−−output** *file*

Write output font to *file* instead of the standard output.

−q, **−−quiet**

Do not generate any error messages.

−h, **−−help**

Print usage information and exit.

−v, **−−version**

Print the version number and some short non-warranty information and exit.
