## NAME

e2pall - convert all EPS files in a LaTeX document to PDF

# SYNOPSIS

e2pall TEXFILE

## DESCRIPTION

**e2pall** searches through *TEXFILE* for \includegraphics commands to find the base names of image files. When it finds one, **e2pall** runs **epstopdf**(1) to create a PDF file from the EPS file.

**e2pall** will check to be sure that an existing PDF file is up-to-date with the EPS file, and will not run **epstopdf**(1) if the PDF file is newer than the EPS file.

#### BUGS

Seems to be broken

Cannot handle  $\input{filename}$  or  $\includegraphics{filename}$  split over more than one line

Must be run from same directory as the LaTeX file

Does not look down \$TEXINPUTS

Cannot handle documents that use \include commands

Assumes all files included with \includegraphics are EPS files

#### SEE ALSO

epstopdf(1)

### AUTHOR

**e2pall** was written by Jody Klymak <jklymak@apl.washington.edu> and published in a posting to the <pdftex@tug.org> (mailing list).

This manual page was written by C.M. Connelly  $\langle c@eskimo.com \rangle$ , for the Debian GNU/Linux system. It may be used by other distributions without contacting the author. Any mistakes or omissions in the manual page are my fault; inquiries about or corrections to this manual page should be directed to me (and not to the primary author).
