NAME

      mktexmf – create a Metafont source file

SYNOPSIS

      mktexmf *font*

DESCRIPTION

      This manual page is not meant to be exhaustive. The complete documentation for this version of TeX can be found in the info file or manual *Kpathsea: A library for path searching*.

      mktexmf is used to generate the METAFONT source file for *font*, if possible. For example, *ecrm1200* or *cmr11*.

      The name of the generated file is printed on standard output.

      mktexmf is typically called by other programs, rather than from the command line.

OPTIONS

      mktexmf accepts the following options:

      --help   Print help message and exit.

      --version

            Print version information and exit.

SEE ALSO

      mktexpk(1), **mktextfm**(1).
