

NAME

pdf180 – rotate the pages of pdf files

SYNOPSIS

pdf180 [OPTION [OPTION] ...] [SRC [PAGESPEC] [SRC [PAGESPEC]] ...]

DESCRIPTION

pdf180 rotates the pages of files in the Adobe Portable Document Format (PDF) through 180 degrees.

If no source PDF file ('SRC') is specified, input is from /dev/stdin. If 'PAGESPEC' is omitted, all pages are processed.

Source files are processed sequentially into a single output unless the '--batch' option is used, in which case they are processed separately.

pdf180 operates on one or more PDF files, and (either with the '--batch' option or with '--outfile DIR' where 'DIR' is a directory) the resulting files have the suffix '-rotated180' applied to their names by default. To change the suffix, use the '--suffix' option, for example

pdf180 --suffix 'upturned' --batch myfile1.pdf myfile2.pdf

will result in files named 'myfile1-upturned.pdf' and 'myfile2-upturned.pdf'.

pdf180 is a simple wrapper for pdftjam, which is a front end to many of the capabilities of the pdfpages package for pdflatex. A working installation of pdflatex with the pdfpages package is required.

pdf180 is part of the "PDFjam" package of tools, whose homepage is at <http://go.warwick.ac.uk/pdfjam>.

SETUP

See <http://go.warwick.ac.uk/pdfjam> .

USAGE

For the available options and site/user defaults, see the output of

`pdfjam --help`

For further information and some examples see <http://go.warwick.ac.uk/pdfjam> .

LIMITATIONS AND BUGS

pdf180 does not work with encrypted PDF files, and does not preserve hyperlinks.

Please report bugs! See the website at <http://go.warwick.ac.uk/pdfjam> .

SEE ALSO

pdfjam(1).

LICENSE

PDFjam is distributed under the GNU public license.

AUTHOR

pdf180 is written and maintained by David Firth as part of the PDFjam package.
