NAME

rubibtex – make a bibliography for (La)TeX using Russian letters as item names

SYNOPSIS

rubibtex *BASENAME*

DESCRIPTION

rubibtex is used to run **bibtex**(1) on auxiliary files with Russian characters in item names (citation keys). It is part of the T2 package.

rubibtex copies the auxiliary file to */tmp*, uses **sed**(1) to convert Cyrillic character commands to their 8-bit ASCII equivalents; runs **bibtex**(1) on the modified file; and finally moves the original auxiliary file back (overwriting the modified file).

rubibtex assumes that the **bibtex**(1) database (`bib`) files are encoded with the KOI8-R encoding.

FILES

basename.aux
        LaTeX auxiliary file

BUGS

None known, but report any bugs found to the authors.

COPYRIGHT

The T2 package is Copyright 1997-1999 Werner Lemberg, Vladimir Volovich and any individual authors listed elsewhere in package files.

It may be distributed under the conditions of the LaTeX Project Public License, either version 1.1 of this license or (at your option) any later version.
