SJISCONV(1)

NAME

sjisconv – convert a TeX document in SJIS encoding into 'preprocessed' form.

SYNOPSIS

sjisconv < *infile* > *outfile*

DESCRIPTION

SJIS encoding for Japanese uses the characters $\{, \}$, and \setminus which have special meanings in T_EX documents.

After processing a LATEX $2_{\mathcal{E}}$ document which contains SJIS characters with **sjisconv** you need not care about these special characters.

This filter is part of the CJK macro package for LATEX 2.

SEE ALSO

bg5conv(1), cefconv(1), cefsconv(1), extconv(1), the CJK documentation files.
