NAME

t1rawafm – produce raw AFM metrics from a PostScript Type 1 font

SYNOPSIS

t1rawafm −e ENCODING [OPTIONS...] *font* [*outputfile*]

DESCRIPTION

T1rawafm generates an AFM file with the information available in a PostScript Type 1 font. The AFM file will lack kerns, ligature information, and composite characters, but is otherwise usable. The AFM file is written to the standard output (but see the **−−output** option). If no input font file is supplied, **t1rawafm** reads a PFA or PFB font from the standard input.

OPTIONS

−−output=*file*, **−o** *file*
> Send output to *file* instead of standard output.

−h, **−−help**
> Print usage information and exit.

−−version
> Print the version number and some short non-warranty information and exit.

RETURN VALUES

T1rawafm exits with value 0 if an AFM metrics file was successfully generated, and 1 otherwise.
